NOVATIA CASE STUDY

Novatia PLC is dedicated to helping organisations get maximum value from their IT investments by improving the performance of technology, processes and people.

Novatia practiced what they preached and invested in their own IT by purchasing V1 Project Accounting (V1 PA) for management consultants.

The Solution

The implementation process of new systems is often a contributing factor to the reluctance to change. Novatia however found the migration from their old system to V1 PA straightforward and unproblematic.

“We found that inputting the data into the set up spreadsheet was a very helpful exercise to go through. We were impressed with the way we could set up the entire V1 PA system based on this single spreadsheet. It is a very good principle.

“The customer support team at V1 PA were a great help and continue to be very responsive. Our queries are always dealt with very quickly.”

By making its previous manual system redundant and employing V1 PA, Novatia has saved up to one hour per month just on billing clients, and half an hour per week on timesheets.

The implementation of V1 PA has also improved the visibility of projects to all Novatia staff.

V1 PA is a well designed, fast, reliable system that we are rapidly coming to depend on. We are extremely satisfied with all aspects of our V1 PA implementation. 

Novatia PLC

“The news page is simple but effective as it can be used to convey messages to all staff that are using the system whenever they log in. Before, staff could not access live project information; now everyone has access to live project information from wherever they are.”

Novatia has found the reporting aspect of V1 PA particularly valuable in providing resource utilisation reports, actual time vs. budgeted time reports, and a comprehensive job list.

“By ensuring that all time is logged, V1 PA provides an exact representation of the resourcing of users. This has strengthened our outlook by enabling us to accurately compare resourced time against logged time.”

This case study has been re-issued to reflect new product branding. Note that the product name in the original case study was "Project Minder".
